The `miniki` beamer theme

`miniki` is a minimal theme for the LaTeX beamer document class that emphasizes simplicity, legibility and elegance.

It has been forked from the *Manc* theme (available at `https://github.com/ibab/beamertheme-manc`), with modifications to fit my taste.

It uses the Fira Sans typeface family with Fira Code as a monospaced font, and it aims to be similar to the `ki` theme from the `xaringan` R package, which can be used to create HTML slide decks.

Block

This is a simple block created using the `block` environment.

Example block

This is an example block created using the `exampleblock` environment.

Manc replaces the default beamer blocks with boxes from the `tcolorbox` package. These can be configured in much more detail than a `beamercolorbox`

Use boxes sparingly to highlight specific pieces of information (theorems, formulas, commands, ...) that you want your audience to remember.[1]

A slide with code

Here is some R code:

```
# Plot using R-base
x ← runif(10)
y ← 2 * x + rnorm(10)
plot(x, y)
```

A slide with some maths

Here a slide with some maths:

$$y = a + \beta x + \varepsilon$$

A slide with a quote

Ball don't lie!

...a wise man once said.

Frame with lists

1. One;
2. Two;
3. Penny and a dime.

- Pizza;
- More pizza;
- Did I say I love pizza?

Thank you.
