# The miniki beamer theme

`miniki` is a minimal theme for the  $\text{\LaTeX}$  beamer document class that emphasizes simplicity, legibility and elegance.

It has been forked from the *Manc* theme (available at <https://github.com/ibab/beamertheme-manc>), with modifications to fit my taste.

It uses the Fira Sans typeface family with Fira Code as a monospaced font, and it aims to be similar to the `ki` theme from the `xaringan` R package, which can be used to create HTML slide decks.

## Block

This is a simple block created using the `block` environment.

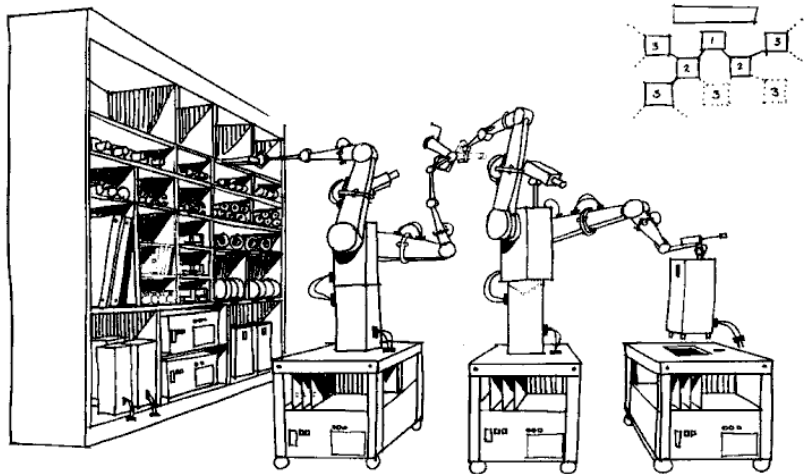

## Example block

This is an example block created using the `exampleblock` environment.

*Manc* replaces the default beamer blocks with boxes from the `tcolorbox` package. These can be configured in much more detail than a `beamercolorbox`

Use boxes sparingly to highlight specific pieces of information (theorems, formulas, commands, ...) that you want your audience to remember.<sup>1</sup>

<sup>1</sup>Add footnotes by using `\footnote[frame]{...}`

Here is some R code:

```
# Plot using R-base  
x <- runif(10)  
y <- 2 * x + rnorm(10)  
plot(x, y)
```

# A slide with some maths

Here a slide with some maths:

$$y = a + \beta x + \varepsilon$$

*Ball don't lie!*

...a wise man once said.

# Frame with lists

1. One;
2. Two;
3. Penny and a dime.
  - Pizza;
  - More pizza;
  - Did I say I love pizza?

Thank you.
